UBS Group

Introduction and basis for preparation

Scope of Basel III Pillar 3 disclosures

The Basel Committee on Banking Supervision (the BCBS) final Basel III capital adequacy framework consists of three complementary pillars. Pillar 1 provides a framework for measuring minimum capital requirements for the credit, market and operational risks faced by banks. Pillar 2 addresses the principles of the supervisory review process, emphasizing the need for a qualitative approach to supervising banks. Pillar 3 requires banks to publish a range of disclosures, mainly covering risk, capital, leverage, liquidity and remuneration.

This report provides Pillar 3 disclosures for the UBS Group and prudential key figures and regulatory information for UBS AG consolidated and standalone, UBS Switzerland AG standalone, UBS Europe SE consolidated and UBS Americas Holding LLC consolidated in the respective sections under "Significant regulated subsidiaries and sub-groups".

This Pillar 3 report has been prepared in accordance with the Swiss Financial Market Supervisory Authority (FINMA) Ordinance on the Disclosure Obligations of Banks and Securities Firms (the DisO-FINMA), the corresponding explanatory notes, and the underlying BCBS Basel framework disclosure requirements. The revised Capital Adequacy Ordinance (the CAO) that incorporates the final Basel III standards into Swiss law, and the five new FINMA ordinances (including the DisO-FINMA) that contain the implementing provisions for the revised CAO, entered into force on 1 January 2025. The DisO-FINMA replaces FINMA Circular 2016/1 "Disclosure – banks" and incorporates in particular new and revised disclosure tables on risks and capital requirements.

› **Refer to "Changes to Pillar 3 disclosure requirements" in the "Introduction and basis for preparation" section of the 31 March 2025 Pillar 3 Report, available under "Pillar 3 disclosures" at *ubs.com/investors*, for more information about new and revised quarterly tables as a result of the implementation of the final Basel III standards in Switzerland**

As UBS is a systemically relevant bank (an SRB) under Swiss banking law, UBS Group AG and UBS AG are required to comply with regulations based on the final Basel III framework as applicable to Swiss SRBs on a consolidated basis, whereas UBS Switzerland AG is exempt from consolidation.

Local regulators may also require the publication of Pillar 3 information at a subsidiary or sub-group level. Where applicable, these local disclosures are provided under "Holding company and significant regulated subsidiaries and sub-groups" at *ubs.com/investors*.

Significant regulatory developments, disclosure requirements and other changes

Banking regulation in Switzerland

In April 2026, the Swiss Federal Council published its final amendments to the CAO specifying the regulatory capital treatment of selected assets. Under the amended ordinance, UBS's capitalized software will be subject to an amortization of a maximum of three years for regulatory capital purposes, irrespective of the actual economic useful life. In addition, prudential valuation adjustments will be revised, resulting in higher capital deductions for assets and liabilities that are subject to valuation uncertainty. The capital treatment of deferred tax assets arising from temporary differences remains unchanged. The amendments to the CAO will become effective on 1 January 2027, except for the revised capital treatment of capitalized software, which will apply from 1 January 2029.

Regarding additional tier 1 (AT1) capital instruments, the Swiss Federal Council has decided not to proceed with the adjustments proposed in June 2025. The Swiss Federal Council also finalized measures that aim to enable FINMA and other authorities to better assess the liquidity of banks in a stressed situation.

In addition, the Swiss Federal Council submitted to the Swiss Parliament its final proposal for amendments to the Banking Act that govern the capital treatment of systemically important banks' investments in foreign subsidiaries. This proposal will now be deliberated by the Swiss Parliament. Under the proposal, investments in foreign subsidiaries would be fully deducted from UBS AG's standalone common equity tier 1 (CET1) capital. The amendments would be phased in over seven years, with a 65% deduction requirement in the first year and increasing to 100% by 5-percentage-point increments each year.

For UBS AG standalone, the amendments at the ordinance level related to capitalized software and prudential valuation adjustments, once fully implemented, are expected to have a net CET1 capital impact of approximately USD 2bn. The proposed full deduction of investments in foreign subsidiaries would require UBS AG standalone to hold additional CET1 capital of around USD 20bn. The total incremental CET1 capital would amount to around USD 22bn required at the UBS AG standalone level. At the Group level, the amendments at ordinance level will lead to a derecognition of around USD 4bn of net CET1 capital. These estimates have been calculated based on UBS Group AG's consolidated balance sheet as of 31 December 2025, assuming that all capital measures are adopted as currently proposed and using an assumed CET1 capital ratio of 12.5% for UBS AG and 14.0% for UBS Group.

The incremental capital requirement of USD 22bn mentioned above would come on top of the USD 15bn of capital required as a result of the Credit Suisse acquisition. This includes around USD 9bn in response to the abolition of regulatory concessions that had been granted to Credit Suisse and around USD 6bn to meet the progressive requirements due to the increased size and higher market share of the combined business. On this basis, UBS would be required to hold around USD 37bn of additional CET1 capital in total.

The Swiss National Bank establishes the basis for the Extended Liquidity Facility

In February 2026, the Swiss National Bank (the SNB) introduced the Extended Liquidity Facility (the ELF). The ELF extends the existing Emergency Liquidity Assistance (the ELA) to eligible banks domiciled in Switzerland and provides access to liquidity support from the SNB through a streamlined process. Up to the bank-specific ELF limit, no application or formal solvency confirmation is required for liquidity drawdowns. For amounts exceeding the ELF limit, banks must submit an application and provide evidence of solvency and viability, supported by an opinion from FINMA. All drawdowns under the ELF must be fully collateralized. After a pilot phase in 2026, the ELF is expected to become operational in early 2027. For drawdowns up to the ELF limit, UBS expects the ELF to reduce the operational burden for accessing liquidity support from the SNB.

Developments related to the implementation of the final Basel III standards

In March 2026, the Federal Reserve Board, the Federal Deposit Insurance Corporation (the FDIC) and the Office of the Comptroller of the Currency (the OCC) issued proposals with an impact on capital requirements, including proposals to implement the remaining elements of the final Basel III guidelines, a modified standardized approach and the recalibration of the surcharge for global systemically important banks (G-SIBs). Under the first proposal, category I banks (US G-SIBs) and category II banks would be subject to the expanded risk-based approach (the ERBA) for calculating risk-weighted assets. The second proposal would introduce a revised standardized approach to risk-based capital for banks not subject to the ERBA, including UBS Americas Holding LLC. In addition, UBS Americas Holding LLC would not be required to apply an operational risk charge. The consultation does not propose a start date or phase-in period. The proposals are open for comment until 18 June 2026. The impact on UBS will depend on the final regulations and future business development.

Also in the first quarter of 2026, the European Commission launched a consultation on the competitiveness of the EU banking sector and the complexity and effectiveness of the EU prudential and macroprudential framework, and the UK Prudential Regulation Authority (the PRA) published its final policy statements on the implementation of the Basel 3.1 standards. The implementation of these remains set for 1 January 2027, with full phase-in by 1 January 2030, except for the implementation of the internal model approach for market risk in accordance with the Fundamental Review of the Trading Book (the FRTB) framework, which has been postponed to 1 January 2028.

Other developments

Credit Suisse International standalone

In agreement with FINMA, starting with the 31 March 2026 Pillar 3 Report, we have discontinued the quarterly disclosure of prudential key figures and regulatory information for Credit Suisse International standalone.

Capital returns

On 15 April 2026, the shareholders approved a dividend of USD 1.10 per share at the Annual General Meeting. The dividend was paid on 23 April 2026 to shareholders of record on 22 April 2026.

In the first quarter of 2026, we repurchased USD 0.9bn of shares and we are on track to repurchase USD 3bn of shares by the end of July 2026, with an aim to do more by year-end 2026. The amount of additional repurchases is subject to our financial performance and outlook, maintaining a CET1 capital ratio of around 14% at year-end, and visibility on parliamentary deliberations on the treatment of foreign subsidiaries.

Frequency and comparability of Pillar 3 disclosures

The DisO-FINMA specifies the reporting frequency for each disclosure. In line with these FINMA-specified disclosure requirements, including with regard to comparative periods, we provide quantitative comparative information as of 31 December 2025 for disclosures required on a quarterly basis. Where specifically required by FINMA and / or the BCBS, we disclose comparative information for additional reporting dates.

› **Refer to the 31 December 2025 Pillar 3 Report, available under "Pillar 3 disclosures" at *ubs.com/investors*, for more information about previously published quarterly movement commentary**

› **Refer to the 31 March 2025 Pillar 3 Report, available under "Pillar 3 disclosures" at *ubs.com/investors*, for more information about quarterly tables currently not applicable to UBS**

Key metrics

Key metrics for the first quarter of 2026

The KM1 and KM2 tables below are based on the Swiss Financial Market Supervisory Authority (FINMA) Ordinance on the Disclosure Obligations of Banks and Securities Firms (DisO-FINMA) rules. The KM2 table includes a reference to the total loss-absorbing capacity (TLAC) term sheet, published by the Financial Stability Board (the FSB). The FSB provides this term sheet at *fsb.org/2015/11/total-loss-absorbing-capacity-tlac-principles-and-term-sheet*.

Our capital ratio increased, reflecting an increase in our tier 1 capital, partly offset by an increase in risk-weighted assets (RWA). Our leverage ratio increased, driven by an increase in our tier 1 capital, partly offset by an increase in the leverage ratio denominator (the LRD).

Our common equity tier 1 (CET1) capital increased by USD 2.1bn to USD 73.3bn, mainly driven by operating profit before tax of USD 3.8bn, partly offset by dividend accruals of USD 0.9bn, current tax expenses of USD 0.5bn and negative foreign currency translation effects of USD 0.2bn. Share repurchases of USD 0.9bn made under our new, 2026 share repurchase program in the first quarter of 2026 did not affect our CET1 capital position, as there was an identical reduction in the capital reserve for expected future share repurchases.

Our tier 1 capital increased by USD 5.8bn to USD 97.0bn, reflecting the aforementioned USD 2.1bn increase in CET1 capital and a USD 3.7bn increase in additional tier 1 (AT1) capital. The increase in AT1 capital predominantly reflected the issuance of new AT1 capital instruments equivalent to USD 3.7bn.

The TLAC available as of 31 March 2026 included CET1 capital, AT1 capital and non-regulatory capital elements of TLAC.

Our available TLAC increased by USD 10.2bn to USD 197.6bn, reflecting the aforementioned increase in tier 1 capital and a USD 4.5bn increase in non-regulatory capital elements of TLAC. The increase in non-regulatory capital elements of TLAC was mainly driven by new issuances totaling USD 9.0bn equivalent of TLAC-eligible senior unsecured debt instruments, partly offset by the redemption of TLAC-eligible senior unsecured debt instruments for the equivalent of USD 3.3bn and negative impacts from interest rate risk hedge, foreign currency translation and other effects.

During the first quarter of 2026, RWA increased by USD 7.0bn to USD 500.4bn, driven by a USD 7.8bn increase resulting from asset size and other movements and a USD 1.0bn increase driven by model updates and methodology changes, partly offset by a USD 1.9bn decrease from currency effects.

The LRD increased by USD 31.0bn to USD 1,653.5bn, driven by a USD 40.6bn increase from asset size and other movements, partly offset by a USD 9.5bn decrease from currency effects.

The quarterly average liquidity coverage ratio of the UBS Group decreased 4.8 percentage points to 177.8%, remaining above the prudential requirement communicated by FINMA. Average net cash outflows increased by USD 6.2bn to USD 187.9bn, primarily reflecting higher net outflows from deposits. The effect of the increase in net cash outflows was partly offset by a USD 2.4bn increase in average high-quality liquid assets (HQLA), mainly reflecting higher cash available due to an increase in customer deposits, higher proceeds from debt issued at amortized cost and higher net brokerage payables, partly offset by lower cash available from higher lending assets and cash collateral margin requirements, as well as a decrease in HQLA from securities financing transactions.

As of 31 March 2026, the net stable funding ratio of the UBS Group increased 0.9 percentage points to 116.9%, remaining above the prudential requirement communicated by FINMA. Available stable funding increased by USD 14.6bn to USD 896.6bn, mainly driven by increases in debt issued measured at amortized cost and regulatory capital. Required stable funding increased by USD 7.0bn to USD 766.8bn, mainly reflecting higher derivatives and cash collateral receivables on derivative instruments, and higher lending assets, partly offset by lower trading assets.

16a	*of which: cash outflows*	*417,159*	*390,134*	*388,343*	*385,105*	*362,013*
16b	*of which: cash inflows*	*229,290*	*208,441*	*197,984*	*188,259*	*185,823*
17	LCR (%)	177.83	182.64	182.12	182.31	180.96
Net stable funding ratio (NSFR)						
18	Total available stable funding	896,644	882,039	898,762	904,703	861,717
19	Total required stable funding	766,795	759,829	750,960	738,891	693,777
20	NSFR (%)	116.93	116.08	119.68	122.44	124.21

1 Calculated as 8% of total RWA, based on total capital minimum requirements, excluding CET1 buffer requirements. 2 Excludes non-BCBS capital buffer requirements for risk-weighted positions that are directly or indirectly backed by residential properties in Switzerland. 3 Represents the CET1 ratio that is available to meet buffer requirements. Calculated as the CET1 ratio minus the BCBS CET1 capital requirement and, where applicable, minus the BCBS tier 2 capital requirement met with CET1 capital. 4 There is currently no temporary exemption of central bank reserves for UBS. 5 The higher of capital requirements based on 8% of RWA or 3% of LRD. 6 Calculated after the application of haircuts and inflow and outflow rates, as well as, where applicable, caps on Level 2 assets and cash inflows. Calculated based on an average of 62 data points in the first quarter of 2026 and 64 data points in the fourth quarter of 2025. For the prior-quarter data points, refer to the respective Pillar 3 Report, available under "Pillar 3 disclosures" at ubs.com/investors, for more information.

KM2: Key metrics – TLAC requirements (at resolution group level)[1]

USD m, except where indicated		31.3.26	31.12.25	30.9.25	30.6.25	31.3.25

6b	Does the subordination exemption in the penultimate paragraph of Section 11 of the FSB TLAC Term Sheet apply?	No				
6c	If the capped subordination exemption applies, the amount of funding issued that ranks pari passu with excluded liabilities and that is recognized as external TLAC, divided by funding issued that ranks pari passu with excluded liabilities and that would be recognized as external TLAC if no cap was applied (%)	N/A – Refer to our response to 6b.				

1 Resolution group level is defined as the UBS Group AG consolidated level.

Risk-weighted assets

Overview of risk-weighted assets and capital requirements

The OV1 table below provides an overview of our risk-weighted assets (RWA) and the related minimum capital requirements by risk type. The table presented is based on the respective Swiss Financial Market Supervisory Authority (FINMA) template and empty rows indicate current non-applicability to UBS.

During the first quarter of 2026, RWA increased by USD 7.0bn to USD 500.4bn, driven by a USD 7.8bn increase resulting from asset size and other movements and a USD 1.0bn increase driven by model updates and methodology changes, partly offset by a USD 1.9bn decrease from currency effects.

Credit and counterparty credit risk

Credit and counterparty credit risk RWA include settlement risk, credit valuation adjustments, equity and investments in funds exposures in the banking book, and securitization exposures in the banking book but exclude non-counterparty-related risk. Credit and counterparty credit risk RWA increased by USD 5.7bn to USD 305.7bn as of 31 March 2026, driven by a USD 6.5bn increase resulting from asset size and other movements and a USD 1.0bn increase due to model updates and methodology changes, partly offset by a USD 1.8bn decrease from currency effects.

Asset size and other movements by business division and Group Items

- Investment Bank RWA increased by USD 5.1bn, mainly due to increases in loans and loan commitments, market-driven movements and higher levels of client activity in derivatives, and increased allocation of high-quality liquid assets.
- Global Wealth Management RWA increased by USD 1.9bn, primarily driven by increases in loans and loan commitments, and higher levels of client activity and market-driven movements in derivatives.
- Personal & Corporate Banking RWA increased by USD 0.5bn, mainly due to higher RWA on derivatives, partly offset by the sale of our 50% interest in Swisscard AECS GmbH.
- Group Items RWA increased by USD 0.1bn.
- Non-core and Legacy RWA decreased by USD 0.7bn, primarily driven by our actions to actively unwind the portfolio, in addition to the natural roll-off.
- Asset Management RWA decreased by USD 0.3bn.

Model updates and methodology changes resulted in an RWA increase of USD 1.0bn, mainly reflecting higher RWA from model harmonization of Swiss corporate exposures in Personal & Corporate Banking and updates to the methodology for residual risk on legacy synthetic securitizations in the Investment Bank. This was partly offset by decreases in RWA on recourse-based lending in Global Wealth Management and commodity trade finance facilities in Personal & Corporate Banking.

Market risk

Market risk RWA increased by USD 0.8bn to USD 24.5bn in the first quarter of 2026, due to asset size and other movements in the Investment Bank's Global Markets business.

Operational risk

Operational risk RWA were unchanged at USD 135.4bn.

The flow tables for credit risk, counterparty credit risk (CCR) and credit valuation adjustment (CVA) RWA below provide further details regarding the movements in RWA in the first quarter of 2026.

› **Refer to the "Introduction and basis for preparation" section of this report for more information about the regulatory standards applied**

› **Refer to the "Capital management" section of the UBS Group first quarter 2026 report, available under "Quarterly reporting" at *ubs.com/investors*, for more information about capital management and RWA, including details regarding movements in RWA during the first quarter of 2026**

1 Calculated based on 8% of RWA. 2 Non-counterparty-related risk includes property, equipment, software and other items. 3 The Swiss sectoral real estate floor is not applicable at the level of UBS Group AG consolidated. 4 Excludes settlement risk, which is separately reported in line 15 "Settlement risk". Includes RWA with central counterparties. The split between the sub-components of counterparty credit risk refers to the calculation of the exposure measure. 5 Includes items subject to threshold deduction treatment that do not exceed their respective threshold and are risk weighted at 250%. Items subject to threshold deduction treatment include significant investments in common shares of non-consolidated financial institutions (banking, insurance and financial entities) and deferred tax assets arising from temporary differences. 6 The overall output floor of 72.5% is subject to a phase-in until 1 January 2028. As of 1 January 2026, the applicable overall output floor at the level of UBS Group AG consolidated increased to 65% and will increase to 70% in 2027. 7 FINMA has not opted to implement a transitional cap that would limit the increase in RWA to 25% of a bank's RWA before the application of the output floor. 8 The total of our actual final Basel III RWA is higher than 65% of our final Basel III RWA calculated using the full standardized approach. Therefore, the overall output floor is not binding, and our RWA before and after the effects of the overall output floor are equal.

Comparison of modelled and standardized RWA at risk level

The CMS1 table compares RWA determined using models approved by FINMA with RWA determined under the full standardized approach. The table also provides the full standardized approach for RWA that are the base of the phased-in overall output floor. The purpose of the overall output floor is to ensure that banks' capital requirements based on modelled approaches where permitted do not fall below a certain percentage of capital requirements based on the full standardized approach, thereby reducing excessive variability of RWA and enhancing the comparability of risk-based capital ratios across banks. The impact of the output floor, if applicable, will be disclosed in the "OV1: Overview of RWA" table in rows 27 and 28. The applicable threshold pursuant to the reporting date is disclosed in row 26 of the OV1 table, and in column e in the CMS1 table below. As of 1 January 2026, the output floor increased to 65% from 60% and will incrementally increase to a level of 72.5% by 2028. As of 31 March 2026, the floor is not binding at the level of UBS Group, i.e. the total of our actual RWA shown in column c in the CMS1 table below is greater than 65% of the RWA calculated under the full standardized approach shown in column e, and therefore no adjustment is required. UBS is undertaking mitigating actions with respect to RWA under the standardized approach to minimize a future floor adjustment required as the level of the output floor increases.

› **Refer to "Overview of risk-weighted assets and capital requirements" in this section for information about the OV1 table**

The table below provides a summary of the key conceptual differences between the internal model approach and the standardized approach.

Key differences between the internal model approach and the standardized approach

	Internal model approach	Standardized approach	Key impact
Risk weighting	Reliance on internal ratings where each counterparty / transaction receives a rating.	Reliance on external credit assessment institutions where permitted in the regulatory framework.	Modelled approach produces RWA that is more risk sensitive.
	Granular risk-sensitive risk weight differentiation via individual probability of default (PD) and loss given default (LGD) for mortgages.	Less granular risk weights based on loan-to-value (LTV) bands for mortgages.	The Group's residential mortgage portfolio is focused on the Swiss market, and the Group has robust review processes in place concerning borrowers' ability to repay. This results in the Group's residential mortgage portfolio having a low average LTV and results in an average risk weight of around 20% under the advanced internal ratings-based (A-IRB) approach.
	Modelled LGD captures transaction quality features including collateralization. Under the foundation internal ratings-based (F-IRB) approach, the LGD values are calculated based on the rules set by FINMA.	No differentiation for transaction features (except where a claim is subordinated).	Impact relevant across all asset classes.
Credit risk mitigation	Credit risk mitigation recognized via risk-sensitive LGD or exposure at default (EAD).	Limited recognition of credit risk mitigation.	Standardized approach RWA is higher than modelled RWA for most transaction types.
	Wider variety of eligible collateral.	Restricted list of eligible collateral.	Limited recognition of collateral results in higher RWA for Lombard lending and securities financing transactions (SFTs).
	Repo value-at-risk (VaR) permits the use of VaR models to estimate exposure and collateral for SFTs. Approach permits full diversification and netting across all collateral types.	Conservative and crude regulatory haircuts with limited risk-sensitivity.	
	The effects of guarantees and credit derivatives are considered through either adjusting PD and / or LGD estimates. UBS applies the F-IRB approach for guarantee recognition.	In case of eligible guarantees and credit derivatives, substitution is applied and the risk weight applicable to the protection provider can be assigned to the protected portion of the underlying exposure.	
CCF	A credit conversion factor (CCF) is applied to model expected future drawdowns over the 12-month period, irrespective of the actual maturity of a particular transaction. The CCF includes downturn adjustments and is the result of analysis of internal data and expert opinion.	Credit exposure equivalents are determined by applying CCFs to off-balance sheet items. The CCFs vary based on product type, maturity and the underlying contractual agreements.	Modelled CCFs can be more tailored and differentiated.
EAD for derivatives	Internal model method (IMM) facilitates the use of a Monte Carlo simulation to estimate exposure.	The standardized approach for CCR (SA-CCR) is calculated as the replacement costs plus regulatory add-ons that take into account potential future market moves at predetermined fixed rates.	For large, diversified derivatives portfolios, standardized EAD is higher than modelled EAD.
	Application of multiplier on IMM exposure estimate.	Differentiates add-ons by five exposure types and three maturity buckets only.	
	Variability in holding period applied to collateralized transactions, reflecting liquidity risks.	Limited netting can be recognized.	
EAD for SFTs	The repo VaR approach is a model based on a Monte Carlo simulation and historical calibration to estimate exposure, computed as quantile exposure.	The comprehensive approach considers the adjusted exposure after applicable supervisory haircuts on both the exposure and the collateral received to take account of possible future fluctuations in the value of either the exposure or the collateral.	For large, diversified SFT portfolios, standardized EAD is higher than modelled EAD.
Maturity in risk weight	Regulatory RWA function considers maturity: the longer the maturity, the higher the risk weight.	No differentiation for maturity of transactions, except for interbank exposures.	Model approach produces lower RWA for high-quality, short-term transactions.
Credit valuation adjustment	Not applicable under the final Basel III standards.	UBS calculates the CVA risk capital requirement using both the standardized approach (SA-CVA) and the full basic approach (BA-CVA) in line with the final Basel III standards. The SA-CVA uses sensitivities to market risk factors (e.g. interest rates and credit spreads) and uses those sensitivities with regulatory-prescribed risk weights and correlations to arrive at a capital charge. The BA-CVA approach is simpler and less risk sensitive. Where the BA-CVA and the SA-CVA are applied under the output floor calculation, the application of internal ratings is not permitted.	
Securitization exposures in the banking book	The regulatory capital requirements are calculated using a hierarchy of approaches. First, the securitization internal ratings-based approach (SEC-IRBA) is applied, if possible. If this approach cannot be applied, one of the standardized approaches is applied.	If the SEC-IRBA cannot be applied, the regulatory capital requirements are calculated using the following hierarchy of approaches: the securitization external ratings-based approach or the securitization standardized approach (SEC-SA). Otherwise, a 1,250% risk weight is applied as a fallback.	

Key differences between the internal model approach and the standardized approach (continued)

	Internal model approach	Standardized approach	Key impact
Market risk	UBS does not apply the internal model approach for market risk.	UBS currently applies the standardized approach of the Fundamental Review of the Trading Book (the FRTB) framework, in which minimum market risk capital requirements are computed on the basis of three components: the sensitivities-based method (the SBM), the default risk charge (the DRC) and the residual risk add-on (the RRAO). The SBM captures delta, vega and curvature risk of the underlying trading positions, the DRC uses the jump-to-default risk in positions subject to equity and credit risk, and positions that may not be adequately capitalized by the SBM and the DRC additionally attract an RRAO charge. Where the standardized approach is applied under the output floor calculation, the application of internal ratings is not permitted. The new FRTB framework replaced the VaR- and stressed VaR-based Basel 2.5 market risk framework.	
Operational risk	Not applicable under the final Basel III standards.	The standardized approach is based on the business indicator component, derived from financial statement metrics, as well as the internal loss multiplier, derived from average historical operational losses. The new framework replaced the advanced measurement approach.	

As of 31 March 2026, the output floor is set at USD 476.7bn, representing 65% of RWA calculated using the full standardized approach. This floor is USD 23.6bn below the actual RWA of USD 500.4bn.

During the first quarter of 2026, the difference between RWA calculated using the full standardized approach and actual RWA increased by USD 3.7bn, to USD 233.1bn from USD 229.3bn. This increase was primarily driven by changes in asset size and other movements, partially offset by RWA mitigation actions undertaken during the quarter and foreign exchange movements.

Credit risk RWA under the full standardized approach were higher than actual RWA. Under the standardized approach, fixed risk weights are applied to residential mortgage exposures, depending on the LTV. The internal model-based approach considers borrowers' ability to service debt more accurately, including mortgage affordability and calibration based on historic data. The Group's residential mortgage portfolio is focused on the Swiss market, and the Group has robust review processes in place concerning borrowers' ability to repay. This results in the Group's residential mortgage portfolio having a low average LTV and consequently a lower average risk weight under the A-IRB approach compared with the standardized approach. For Lombard lending the average risk weight using internal models is lower than under the standardized approach, primarily due to differences in collateral treatment. In addition, corporate exposures have higher risk weights under the standardized approach compared with the average risk density in the modelled approach.

CCR RWA under the full standardized approach were higher than actual RWA, primarily reflecting higher risk weights under the standardized approach compared with the IRB risk weights mainly in the corporate asset class, especially on managed funds. In addition to risk weights, exposures calculated under the standardized approach are higher, because the standardized approach does not fully recognize the benefits of netting, portfolio diversification and collateral.

CVA RWA calculated using the full standardized approach were higher than actual RWA, as the application of internal ratings is not permitted under the standardized approach for output floor calculations.

RWA on securitization exposure in the banking book calculated using the full standardized approach were higher than actual RWA, due to more conservative assumptions and less granular risk assessments permitted under the SEC-SA when compared with the SEC-IRBA framework.

CMS1: Comparison of modelled and standardized RWA at risk level

USD m		a RWA for modelled approaches that UBS has FINMA approval to use	b RWA for portfolios where standardized approaches are used	c Total Actual RWA (i.e. RWA which banks report as current requirements)	d RWA calculated using full standardized approach (i.e. used in the base of the output floor)	e Output floor base (RWA calculated using full standardized approach)[1]

8	**Total**	**224,790**	**268,608**	**493,397**	**722,726**	**433,635**[3]

1 As of 1 January 2026, the output floor increased to 65% from 60% in 2025. 2 Includes settlement risk, equity investments in funds and items subject to threshold deduction treatment that do not exceed their respective threshold and are risk weighted at 250%. 3 The output floor is applied to total RWAs and not to individual risk categories.

RWA flow statements of credit risk exposures under the internal ratings-based approach

The CR8 table below provides a breakdown of the credit risk RWA movements in the first quarter of 2026 across movement categories defined by the Basel Committee on Banking Supervision (the BCBS).

Credit risk RWA under the IRB approach increased by USD 1.9bn to USD 197.2bn during the first quarter of 2026. This balance reflects credit risk under the IRB approach, including the supervisory slotting approach.

Movements in asset size drove an USD 11.0bn increase in RWA, mainly driven by increases in cash and balances at central banks in Group Treasury, and loans and loan commitments in the Investment Bank and Global Wealth Management.

Movements in asset quality decreased RWA by USD 9.7bn, mainly due to changes in the portfolio mix from an increase in cash and balances at central banks.

Model updates increased RWA by USD 2.5bn, reflecting higher RWA from model harmonization of Swiss corporate exposures in Personal & Corporate Banking and the application of the IRB approach for recourse-based lending in Global Wealth Management.

Methodology and policy changes resulted in an RWA decrease of USD 0.5bn.

Currency effects, driven by the strengthening of the US dollar against other major currencies, resulted in an RWA decrease of USD 1.4bn.

RWA flow statements of counterparty credit risk exposures under the internal model method and VaR

The CCR7 table below presents a flow statement explaining movements in CCR RWA determined under the IMM for derivatives and the VaR approach for SFTs across movement categories defined by the BCBS.

During the first quarter of 2026, the increase in RWA for derivatives subjected to IMM was primarily driven by market-driven movements and higher levels of client activity in the Investment Bank. The increase in RWA for SFTs under the VaR approach was mainly related to higher levels of client activity in the Investment Bank.

› **Refer to "Definitions of credit risk and counterparty credit risk RWA movement table components for CR8 and CCR7" in the "Credit risk" section of the 31 December 2025 Pillar 3 Report, available under "Pillar 3 disclosures" at *ubs.com/investors*, for definitions of CCR RWA movement table components**

CCR7: RWA flow statements of CCR exposures under the internal model method (IMM) and value-at-risk (VaR)

Required total loss-absorbing capacity	26.06	130,398	8.88	146,848
Eligible total loss-absorbing capacity	39.48	197,556	11.95	197,556
Risk-weighted assets / leverage ratio denominator				
Risk-weighted assets		500,355		
Leverage ratio denominator				1,653,460

1 Includes applicable add-ons of 1.88% for risk-weighted assets (RWA) and 0.58% for leverage ratio denominator (LRD), of which 22 basis points for RWA reflect a Pillar 2 capital add-on for the residual exposure (after collateral mitigation) to hedge funds, private equity and family offices, effective 1 January 2025. 2 Includes the Pillar 2 add-on for the residual exposure (after collateral mitigation) to hedge funds, private equity and family offices of 0.15% for CET1 capital and 0.07% for AT1 capital, effective 1 January 2025. For AT1 capital under Pillar 1 requirements a maximum of 4.3% of AT1 capital can be used to meet going concern requirements; 4.37% includes the aforementioned Pillar 2 capital add-on. 3 Our CET1 leverage ratio requirement of 3.58% consists of a 1.5% base requirement, a 1.5% base buffer capital requirement, a 0.28% LRD add-on requirement and a 0.30% market share add-on requirement based on our Swiss credit business. 4 UBS fulfills its minimum going concern capital requirements with CET1 capital and AT1 capital. The actual available and eligible AT1 capital is above the AT1 capital used to meet the minimum requirements (which is capped at 4.37% as explained in footnote 2) as UBS exceeds its minimum going concern capital requirements. 5 A maximum of 25% of the gone concern requirements can be met with instruments that have a remaining maturity of between one and two years. Once at least 75% of the minimum gone concern requirement has been met with instruments that have a remaining maturity of greater than two years, all instruments that have a remaining maturity of between one and two years remain eligible to be included in the total gone concern capital. 6 Systemically important banks (SIBs) are subject to base gone concern capital requirements equivalent to 75% of the total going concern requirements (excluding countercyclical buffer requirements and the Pillar 2 add-on). 7 The Swiss Financial Market Supervisory Authority (FINMA) has the authority to impose a surcharge of up to 25% of the total going concern capital requirements (excluding countercyclical buffer requirements and the Pillar 2 add-on) should obstacles to an SIB's resolvability be identified in future resolvability assessments. 8 Includes applicable add-ons of 1.24% for RWA and 0.43% for LRD. 9 Includes an add-back of 45% of unrealized gains from financial assets measured at fair value through other comprehensive income. Such gains do not qualify as CET1 capital, but 45% of these gains can be recognized as gone concern capital.

Leverage ratio

Basel III leverage ratio

The Basel Committee on Banking Supervision (the BCBS) leverage ratio, as summarized in the "KM1: Key metrics" table in section 2 of this report, is calculated by dividing the period-end tier 1 capital by the period-end leverage ratio denominator (the LRD).

The LRD consists of on-balance sheet assets and off-balance sheet items based on IFRS Accounting Standards. Derivative exposures are adjusted for netting of replacement values and eligible cash variation margin, potential future exposure, and net notional amounts for written credit derivatives. The LRD also includes an additional charge for counterparty credit risk related to securities financing transactions (SFTs).

On-balance sheet items (excluding derivatives and securities financing transactions (SFTs), but including collateral), as disclosed in the LR2 table, differ from IFRS Accounting Standards total assets due to adjustments to the former for the application of the regulatory scope of consolidation and due to the carrying amounts for derivative financial instruments and SFTs, which are removed and replaced with exposures, as per the leverage ratio rules, in separate line items in the LR2 table.

Difference between the Swiss systemically relevant bank leverage ratio and BCBS leverage ratio

The LRD is the same under Swiss systemically relevant bank (SRB) and BCBS rules. However, there is a difference in the capital numerator between the two frameworks. Under BCBS rules only common equity tier 1 and additional tier 1 (AT1) capital are included in the numerator. Under Swiss SRB rules UBS is required to meet going and gone concern leverage ratio requirements. Therefore, depending on the requirement, the numerator includes tier 1 capital instruments, tier 2 capital instruments and / or total loss-absorbing capacity-eligible senior unsecured debt.

The difference between the total leverage ratio exposures of USD 1,653.5bn and total consolidated assets as per the published financial statements of USD 1,686.5bn was USD 33.1bn, reflecting the sum of lines 2 to 12 in the following table.

LR1: Summary comparison of accounting assets vs leverage ratio exposure measure

	USD m	31.3.26	31.12.25
1	Total consolidated assets as per published financial statements	1,686,521	1,617,427
2	Adjustment for investments in banking, financial, insurance or commercial entities that are consolidated for accounting purposes but outside the scope of regulatory consolidation	(20,970)	(21,907)
3	Adjustment for securitized exposures that meet the operational requirements for the recognition of risk transference		
4	Adjustments for temporary exemption of central bank reserves (if applicable)		
5	Adjustment for fiduciary assets recognized on the balance sheet pursuant to the operative accounting framework but excluded from the leverage ratio exposure measure		
6	Adjustments for regular-way purchases and sales of financial assets subject to trade date accounting		
7	Adjustments for eligible cash pooling transactions		
8	Adjustments for derivative financial instruments[1]	(70,223)	(37,043)
9	Adjustment for securities financing transactions (i.e. repos and similar secured lending)	12,363	10,594
10	Adjustment for off-balance sheet items (i.e. conversion to credit equivalent amounts of off-balance sheet exposures)	58,374	64,920
11	Adjustments for prudent valuation adjustments and specific and general provisions which have reduced Tier 1 capital[2]	(874)	(876)
12	Other adjustments	(11,731)	(10,676)
12a	*of which: asset amounts deducted in determining Tier 1 capital*	*(11,454)*	*(11,984)*
12b	*of which: consolidated entities under the regulatory scope of consolidation*		*1,308*
13	**Leverage ratio exposure**	**1,653,460**	**1,622,438**

1 As of 31 December 2025, initial margin posted with exchanges on derivatives was included in Derivative exposures. As of 31 March 2026, we have reclassified initial margin on derivatives under On-balance sheet exposures. 2 Reflects the shortfall to expected losses on advanced internal ratings-based (IRB) portfolio less general provisions. Deduction items other than the IRB shortfall are disclosed in row 12a.

LR2: Leverage ratio common disclosure

1 As of 31 December 2025, initial margin posted with exchanges on derivatives was included in Derivative exposures. As of 31 March 2026, we have reclassified initial margin on derivatives under On-balance sheet exposures. 2 Includes protection sold, including agency transactions. 3 Protection sold can be offset with protection bought on the same underlying reference entity, provided that the conditions according to the Basel III leverage ratio framework and disclosure requirements are met. 4 There is currently no temporary exemption of central bank reserves for UBS. 5 The total Swiss SRB leverage ratio requirement of 5.08% as of 31 March 2026 (5% as of 31 December 2025) is composed of a base requirement and a buffer requirement. The total requirement is above the BCBS leverage ratio requirement, including the G-SIB buffer.

LRD development during the first quarter of 2026

During the first quarter of 2026, the LRD increased by USD 31.0bn to USD 1,653.5bn, driven by a USD 40.6bn increase from asset size and other movements, partly offset by a USD 9.5bn decrease from currency effects.

On-balance sheet exposures (excluding derivatives and securities financing transactions) increased by USD 32.0bn, mainly due to asset size and other movements of USD 39.9bn, partly offset by currency effects of USD 7.9bn. The asset size movement was mainly due to increases in cash and balances at central banks and high-quality liquid asset portfolio securities in Group Treasury. In addition, there was an increase in lending assets, mainly reflecting positive net new loans in Global Wealth Management and Personal & Corporate Banking, and an increase in the Investment Bank. These increases were partly offset by decreases in trading assets reflecting lower inventory held to hedge client positions, as well as market-driven decreases in the Investment Bank. In addition, the initial margin on derivatives of USD 14.0bn was reclassified from Derivative exposures to On-balance sheet exposures.

Derivative exposures decreased by USD 5.4bn, mainly due to asset size and other movements of USD 4.8bn and currency effects of USD 0.6bn. The asset size movement was mainly due to the aforementioned reclassification of initial margin to On-balance sheet exposures and higher netting, partly offset by increases in derivatives and cash collateral receivables on derivative instruments, mainly in the Investment Bank, driven by equity and foreign currency contracts, mainly due to new trades, as well as market-driven increases.

Securities financing transaction exposures increased by USD 10.9bn, mainly due to asset size and other movements of USD 11.6bn, partly offset by currency effects of USD 0.7bn. The asset size movement was primarily due to higher levels of client activity in the Investment Bank and cash reinvestment trades in Group Treasury.

Off-balance sheet items decreased by USD 6.5bn, mainly due to asset size and other movements of USD 6.1bn and currency effects of USD 0.4bn. The asset size movement was primarily due to credit lines in Global Wealth Management becoming uncommitted following changes to certain contractual terms in the course of client account migrations in the first quarter of 2026.

Liquidity and funding

Liquidity coverage ratio

We monitor the liquidity coverage ratio (the LCR) in all significant currencies in order to manage any currency mismatch between high-quality liquid assets (HQLA) and the net expected cash outflows in times of stress.

Further key information	First quarter 2026 report section	Disclosure	First quarter 2026 report page number
Concentration of funding sources	Balance sheet and off-balance sheet	Customer deposits, by currency	48

High-quality liquid assets

HQLA must be easily and immediately convertible into cash at little or no loss of value, especially during a period of stress. HQLA are assets that are of low risk and are unencumbered. Other characteristics of HQLA are ease and certainty of valuation, low correlation with risky assets, listing of the assets on a developed and recognized exchange, existence of an active and sizable market for the assets, and low volatility. Our HQLA predominantly consist of assets that qualify as Level 1 in the LCR framework, including cash, central bank reserves and government bonds. In the first quarter of 2026, our HQLA increased by USD 2.4bn to USD 334.0bn, mainly reflecting higher cash available due to an increase in customer deposits, higher proceeds from debt issued at amortized cost and higher net brokerage payables, partly offset by lower cash available from higher lending assets and cash collateral margin requirements, as well as a decrease in HQLA from securities financing transactions.

High-quality liquid assets (HQLA)

	Average 1Q26[1]			Average 4Q25[1]		
USD m	Level 1 weighted liquidity value[2]	Level 2 weighted liquidity value[2]	Total weighted liquidity value[2]	Level 1 weighted liquidity value[2]	Level 2 weighted liquidity value[2]	Total weighted liquidity value[2]
Cash balances[3]	211,801		211,801	219,658		219,658
Securities (on- and off-balance sheet)	92,949	29,213	122,162	82,454	29,456	111,910
Total HQLA[4]	304,750	29,213	333,963	302,112	29,456	331,568

1 Calculated based on an average of 62 data points in the first quarter of 2026 and 64 data points in the fourth quarter of 2025. 2 Calculated after the application of haircuts and, where applicable, caps on Level 2 assets. 3 Includes cash and balances with central banks and other eligible balances as prescribed by FINMA. 4 Calculated in accordance with FINMA requirements.

Liquidity coverage ratio development during the first quarter of 2026

The quarterly average LCR of the UBS Group decreased 4.8 percentage points to 177.8%, remaining above the prudential requirement communicated by the Swiss Financial Market Supervisory Authority (FINMA).

Average net cash outflows increased by USD 6.2bn to USD 187.9bn, primarily reflecting higher net outflows from deposits. The effect of the increase in net cash outflows was partly offset by a USD 2.4bn increase in average HQLA, mainly reflecting higher cash available due to an increase in customer deposits, higher proceeds from debt issued at amortized cost and higher net brokerage payables, partly offset by lower cash available from higher lending assets and cash collateral margin requirements, as well as a decrease in HQLA from securities financing transactions.

22	Net cash outflows	187,869	181,693
23	**LCR (%)**	177.83	182.64

1 Calculated based on an average of 62 data points in the first quarter of 2026 and 64 data points in the fourth quarter of 2025. 2 Calculated after the application of haircuts and inflow and outflow rates. 3 Effective from 1 January 2026, unweighted outflows from increased liquidity needs related to potential valuation changes on posted cash and level 1 collateral securing derivatives and other transactions have been excluded from Line 11, following prospective alignment with Pillar 3 reporting requirements. This change had no impact on the disclosure of weighted amounts. 4 Includes outflows related to loss of funding on asset-backed securities, covered bonds, other structured financing instruments, asset-backed commercial papers, structured entities (conduits), securities investment vehicles and other such financing facilities. 5 Calculated after the application of haircuts and inflow and outflow rates, as well as, where applicable, caps on Level 2 assets and cash inflows.

Significant regulated subsidiaries and sub-groups

Introduction

Scope of disclosures in these sections

The sections below include capital and other regulatory information as of 31 March 2026 for UBS AG consolidated, UBS AG standalone, UBS Switzerland AG standalone, UBS Europe SE consolidated and UBS Americas Holding LLC consolidated. Capital information in the following sections is based on Pillar 1 capital requirements. Entities may be subject to significant additional Pillar 2 requirements, which represent additional amounts of capital considered necessary and are agreed with regulators based on the risk profile of the respective entity.

› **Refer to the "Introduction and basis for preparation" section of this report for information about the discontinuance of the quarterly disclosure of prudential key figures and regulatory information for Credit Suisse International standalone**

UBS AG consolidated

Key metrics for the first quarter of 2026

The table below is based on the Swiss Financial Market Supervisory Authority (FINMA) Ordinance on the Disclosure Obligations of Banks and Securities Firms (DisO-FINMA) rules and IFRS Accounting Standards.

During the first quarter of 2026, tier 1 capital increased by USD 4.1bn to USD 94.1bn. Common equity tier 1 (CET1) capital increased by USD 0.5bn to USD 70.9bn, mainly driven by operating profit before tax of USD 3.2bn, partly offset by additional dividend accruals of USD 1.8bn, current tax expenses of USD 0.5bn and negative foreign currency translation effects of USD 0.2bn. Additional tier 1 (AT1) capital issued by the Group and on lent to UBS AG increased by USD 3.7bn to USD 23.3bn, reflecting the issuance of new AT1 capital instruments equivalent to USD 3.7bn.

Risk-weighted assets (RWA) increased by USD 7.7bn to USD 497.4bn, driven by an USD 8.5bn increase resulting from asset size and other movements and a USD 1.0bn increase driven by model updates and methodology changes, partly offset by a USD 1.8bn decrease from currency effects.

The leverage ratio denominator (the LRD) increased by USD 32.5bn to USD 1,655.4bn, mainly due to a USD 42.0bn increase from asset size and other movements, partly offset by a USD 9.5bn decrease from currency effects. The asset size movement was mainly due to increases in cash and balances at central banks, high-quality liquid asset (HQLA) portfolio securities, lending assets, securities financing transactions and derivative exposures. These increases were partly offset by decreases in trading assets and off-balance sheet exposures.

Correspondingly, the CET1 capital ratio of UBS AG consolidated decreased to 14.2% from 14.4%, reflecting the aforementioned increase in RWA, partly offset by the aforementioned increase in CET1 capital. The Basel III leverage ratio increased to 5.7% from 5.5%, reflecting the aforementioned increase in tier 1 capital, partly offset by the aforementioned increase in the LRD.

The quarterly average liquidity coverage ratio (the LCR) of UBS AG consolidated decreased 3.9 percentage points to 172.4%, remaining above the prudential requirement communicated by FINMA. The movement in the quarterly average LCR was primarily driven by a USD 5.5bn increase in average net cash outflows to USD 193.9bn, reflecting higher net outflows from deposits. The effect of the increase in net cash outflows was partly offset by a USD 2.4bn increase in average HQLA to USD 334.1bn, mainly reflecting higher cash available due to an increase in customer deposits, higher proceeds from debt issued at amortized cost and higher net brokerage payables, partly offset by lower cash available from higher lending assets and cash collateral margin requirements, as well as a decrease in HQLA from securities financing transactions.

As of 31 March 2026, the net stable funding ratio of UBS AG consolidated increased 0.4 percentage points to 116.1%, remaining above the prudential requirement communicated by FINMA. Available stable funding increased by USD 13.8bn to USD 887.3bn, mainly driven by increases in debt issued measured at amortized cost and regulatory capital. Required stable funding increased by USD 9.0bn to USD 764.3bn, mainly reflecting higher derivatives and cash collateral receivables on derivative instruments, and higher lending assets, partly offset by lower trading assets.

1 Calculated as 8% of total RWA, based on total capital minimum requirements, excluding CET1 buffer requirements. 2 Swiss SRB going and gone concern requirements and information for UBS AG consolidated are provided below in this section. 3 Excludes non-BCBS capital buffer requirements for risk-weighted positions that are directly or indirectly backed by residential properties in Switzerland. 4 Represents the CET1 ratio that is available to meet buffer requirements. Calculated as the CET1 ratio minus the BCBS CET1 capital requirement and, where applicable, minus the BCBS tier 2 capital requirement met with CET1 capital. 5 There is currently no temporary exemption of central bank reserves for UBS. 6 The higher of capital requirements based on 8% of RWA or 3% of LRD. 7 Calculated after the application of haircuts and inflow and outflow rates, as well as, where applicable, caps on Level 2 assets and cash inflows. Calculated based on an average of 62 data points in the first quarter of 2026 and 64 data points in the fourth quarter of 2025. For the prior-quarter data points, refer to the respective Pillar 3 Report, available under "Pillar 3 disclosures" at ubs.com/investors, for more information.

Swiss systemically relevant bank going and gone concern requirements and information

The tables below provide details of the Swiss systemically relevant bank RWA- and LRD-based going and gone concern requirements and information as required by FINMA; details regarding eligible gone concern instruments are also provided below.

Outstanding total loss-absorbing capacity-eligible unsecured debt instruments are eligible to meet gone concern requirements until one year before maturity.

More information about the going and gone concern requirements is provided in the "Total loss-absorbing capacity" section of the UBS AG Annual Report 2025, available under "Annual reporting" at *ubs.com/investors.*

Required total loss-absorbing capacity	26.09	129,790	8.89	147,127
Eligible total loss-absorbing capacity	38.37	190,846	11.53	190,846
Risk-weighted assets / leverage ratio denominator				
Risk-weighted assets		497,433		
Leverage ratio denominator				1,655,400

1 Includes applicable add-ons of 1.90% for risk-weighted assets (RWA) and 0.58% for leverage ratio denominator (LRD), of which 2 basis points for RWA and 1 basis point for LRD reflect a Pillar 2 capital add-on of USD 107m related to the supply chain finance funds matter at Credit Suisse. An additional 22 basis points for RWA reflect a Pillar 2 capital add-on for the residual exposure (after collateral mitigation) to hedge funds, private equity and family offices, effective 1 January 2025. 2 Includes the Pillar 2 add-on for the residual exposure (after collateral mitigation) to hedge funds, private equity and family offices of 0.16% for CET1 capital and 0.07% for AT1 capital, effective 1 January 2025. For AT1 capital under Pillar 1 requirements a maximum of 4.3% of AT1 capital can be used to meet going concern requirements; 4.37% includes the aforementioned Pillar 2 capital add-on. 3 Our CET1 leverage ratio requirement of 3.58% consists of a 1.5% base requirement, a 1.5% base buffer capital requirement, a 0.28% LRD add-on requirement, a 0.30% market share add-on requirement based on our Swiss credit business and a 0.01% Pillar 2 capital add-on related to the supply chain finance funds matter at Credit Suisse. 4 UBS fulfills its minimum going concern capital requirements with CET1 capital and AT1 capital. The actual available and eligible AT1 capital is above the AT1 capital used to meet the minimum requirements (which is capped at 4.37% as explained in footnote 2) as UBS exceeds its minimum going concern requirements. 5 A maximum of 25% of the gone concern requirements can be met with instruments that have a remaining maturity of between one and two years. Once at least 75% of the minimum gone concern requirement has been met with instruments that have a remaining maturity of greater than two years, all instruments that have a remaining maturity of between one and two years remain eligible to be included in the total gone concern capital. 6 Systemically important banks (SIBs) are subject to base gone concern capital requirements equivalent to 75% of the total going concern requirements (excluding countercyclical buffer requirements and the Pillar 2 add-ons). 7 FINMA has the authority to impose a surcharge of up to 25% of the total going concern capital requirements (excluding countercyclical buffer requirements and the Pillar 2 add-ons) should obstacles to an SIB's resolvability be identified in future resolvability assessments. 8 Includes applicable add-ons of 1.24% for RWA and 0.43% for LRD. 9 Includes an add-back of 45% of unrealized gains from financial assets measured at fair value through other comprehensive income. Such gains do not qualify as CET1 capital, but 45% of these gains can be recognized as gone concern capital.

UBS AG standalone

Key metrics for the first quarter of 2026

The table below is based on the Swiss Financial Market Supervisory Authority (FINMA) Ordinance on the Disclosure Obligations of Banks and Securities Firms (DisO-FINMA) rules and IFRS Accounting Standards.

During the first quarter of 2026, tier 1 capital increased by USD 3.0bn to USD 96.7bn. Common equity tier 1 (CET1) capital decreased by USD 0.6bn to USD 73.5bn, mainly as operating profit before tax of USD 1.0bn was more than offset by additional dividend accruals of USD 1.8bn. Additional tier 1 (AT1) capital issued by the Group and on lent to UBS AG increased by USD 3.7bn to USD 23.3bn, reflecting the issuance of new AT1 capital instruments equivalent to USD 3.7bn.

Risk-weighted assets (RWA) increased by USD 16.5bn to USD 508.1bn, driven by a USD 9.2bn increase in RWA on investments in Swiss and foreign-domiciled subsidiaries, predominantly due to the phased increase of risk weights in accordance with the relevant FINMA decree. In addition, there were increases of USD 6.5bn in credit and counterparty credit risk RWA and USD 1.8bn in market risk RWA, partly offset by a decrease of USD 1.3bn in operational risk RWA.

The leverage ratio denominator (the LRD) decreased by USD 2.5bn to USD 927.5bn, driven by a USD 4.2bn decrease from currency effects, partly offset by a USD 1.8bn increase from asset size and other movements. The asset size movement was mainly driven by increases in securities financing transactions, cash and balances at central banks, and derivatives exposures, partly offset by decreases in trading portfolio assets and off-balance sheet exposures.

Correspondingly, the CET1 capital ratio of UBS AG standalone decreased to 14.5% from 15.1%, reflecting the aforementioned increase in RWA and the aforementioned decrease in CET1 capital. The Basel III leverage ratio increased to 10.4% from 10.1%, reflecting the aforementioned increase in tier 1 capital and the aforementioned decrease in the LRD.

The quarterly average liquidity coverage ratio (the LCR) of UBS AG standalone decreased 3.7 percentage points to 231.2%, remaining above the prudential requirement communicated by FINMA. The movement in the quarterly average LCR was primarily driven by a USD 3.7bn increase in average net cash outflows to USD 67.4bn, mainly reflecting lower inflows from intercompany loans. The effect of the increase in net cash outflows was partly offset by a USD 6.5bn increase in average high-quality liquid assets to USD 155.8bn, mainly reflecting higher cash available from funding from UBS Group AG and capital repatriations, and higher net brokerage payables, partly offset by lower cash available from lower customer deposits.

As of 31 March 2026, the net stable funding ratio of UBS AG standalone increased 0.8 percentage points to 91.5%, remaining above the prudential requirement communicated by FINMA. Available stable funding decreased by USD 7.3bn to USD 397.5bn, mainly driven by lower customer deposits, partly offset by higher debt issued measured at amortized cost and funding from UBS Group AG. Required stable funding decreased by USD 12.0bn to USD 434.5bn, primarily reflecting lower lending assets and trading assets, partly offset by higher derivatives and cash collaterals receivables on derivative instruments.

1 Based on phase-in rules for RWA. Refer to "Swiss systemically relevant bank going and gone concern requirements and information" below for more information. 2 Calculated as 8% of total RWA, based on total capital minimum requirements, excluding CET1 buffer requirements. 3 Swiss SRB going and gone concern requirements and information for UBS AG standalone are provided below in this section. 4 Excludes non-BCBS capital buffer requirements for risk-weighted positions that are directly or indirectly backed by residential properties in Switzerland. 5 Represents the CET1 ratio that is available to meet buffer requirements. Calculated as the CET1 ratio minus the BCBS CET1 capital requirement and, where applicable, minus the BCBS tier 2 capital requirement met with CET1 capital. 6 There is currently no temporary exemption of central bank reserves for UBS. 7 The higher of capital requirements based on 8% of RWA or 3% of LRD. 8 Calculated after the application of haircuts and inflow and outflow rates, as well as, where applicable, caps on Level 2 assets and cash inflows. Calculated based on an average of 62 data points in the first quarter of 2026 and 64 data points in the fourth quarter of 2025. For the prior-quarter data points, refer to the respective Pillar 3 Report, available under "Pillar 3 disclosures" at ubs.com/investors, for more information. 9 In accordance with Art. 17h para. 3 and 4 of the Liquidity Ordinance, UBS AG standalone is required to maintain a minimum NSFR of at least 80% without taking into account excess funding of UBS Switzerland AG and 100% after taking into account such excess funding.

Swiss systemically relevant bank going and gone concern requirements and information

The tables below provide details of the Swiss systemically relevant bank RWA- and LRD-based going and gone concern requirements and information as required by FINMA; details regarding eligible gone concern instruments are also provided below.

UBS AG standalone is subject to a gone concern capital requirement based on the sum of: (i) the nominal value of the gone concern instruments issued by UBS entities and held by the parent firm; (ii) 75% of the going concern capital requirements resulting from third-party exposure on a standalone basis; and (iii) a buffer requirement equal to 30% of the Group's gone concern capital requirement on UBS AG's consolidated exposure. The gone concern capital requirement is the higher of the RWA- and LRD-based requirements, calculated separately. The gone concern capital coverage ratio reflects how much gone concern capital is available to meet the gone concern requirement. Outstanding total loss-absorbing capacity-eligible unsecured debt instruments are eligible to meet gone concern requirements until one year before maturity.

More information about the going and gone concern requirements is provided in the "UBS AG standalone" section of the 31 December 2025 Pillar 3 Report, available under "Pillar 3 disclosures" at *ubs.com/investors.*

1 Fully applied relates to participation RWA. Direct and indirect investments including holding of regulatory capital instruments in Switzerland-domiciled subsidiaries and for direct and indirect investments including holding of regulatory capital instruments in foreign-domiciled subsidiaries are risk weighted at 240% and 360%, respectively, for the current year. As per current rules, risk weights will gradually increase by 5 percentage points per year for Switzerland-domiciled investments and 20 percentage points per year for foreign-domiciled investments until the fully applied risk weights of 250% and 400%, respectively, are applied. 2 Includes applicable add-ons of 1.88% for risk-weighted assets (RWA, phase-in), 1.87% for risk-weighted assets (RWA, fully applied) and 0.59% for leverage ratio denominator (LRD), of which 2 basis points for RWA phase-in, 2 basis points for RWA fully applied and 1 basis point for LRD reflect a Pillar 2 capital add-on of USD 107m related to the supply chain finance funds matter at Credit Suisse. An additional 20 basis points for RWA phase-in and 20 basis points for RWA fully applied reflect a Pillar 2 capital add-on for the residual exposure (after collateral mitigation) to hedge funds, private equity and family offices, effective 1 January 2025. 3 Includes the Pillar 2 add-on for the residual exposure (after collateral mitigation) to hedge funds, private equity and family offices of 0.14% for CET1 capital and 0.06% for AT1 capital for RWA phase-in and 0.14% for CET1 capital and 0.06% for AT1 capital for RWA fully applied, effective 1 January 2025. For AT1 capital under Pillar 1 requirements a maximum of 4.3% of AT1 capital can be used to meet going concern requirements; 4.36% for RWA phase-in and 4.36% for RWA fully applied include the aforementioned Pillar 2 capital add-on. 4 UBS fulfills its minimum going concern capital requirements with CET1 capital and AT1 capital. The actual available and eligible AT1 capital is above the AT1 capital used to meet the minimum requirements (which is capped at 4.36% as explained in footnote 3) as UBS exceeds its minimum going concern requirements . 5 A maximum of 25% of the gone concern requirements can be met with instruments that have a remaining maturity of between one and two years. Once at least 75% of the minimum gone concern requirement has been met with instruments that have a remaining maturity of greater than two years, all instruments that have a remaining maturity of between one and two years remain eligible to be included in the total gone concern capital. 6 Includes an add-back of 45% of unrealized gains from financial assets measured at fair value through other comprehensive income. Such gains do not qualify as CET1 capital, but 45% of these gains can be recognized as gone concern capital.

UBS Switzerland AG standalone

Key metrics for the first quarter of 2026

The table below is based on the Swiss Financial Market Supervisory Authority (FINMA) Ordinance on the Disclosure Obligations of Banks and Securities Firms (DisO-FINMA) rules and IFRS Accounting Standards.

During the first quarter of 2026, common equity tier 1 capital increased by CHF 0.2bn to CHF 21.4bn, mainly driven by operating profit, largely offset by additional dividend accruals.

Total risk-weighted assets (RWA) increased by CHF 7.7bn to CHF 171.8bn, mainly driven by an increase in credit risk and operational risk RWA.

The leverage ratio denominator (the LRD) increased by CHF 26.1bn to CHF 564.4bn, primarily reflecting higher lending exposures and higher cash and balances at central banks, as well as an increase in derivative exposures. This was partly offset by lower off-balance-sheet exposures and securities financing transactions.

The quarterly average liquidity coverage ratio (the LCR) of UBS Switzerland AG decreased 1.0 percentage point to 131.0%, remaining above the prudential requirement communicated by FINMA. The movement in the quarterly average LCR was primarily driven by a CHF 4.7bn decrease in average high-quality liquid assets to CHF 110.5bn, mainly reflecting lower cash available from higher lending assets and lower funding from UBS AG, partly offset by higher cash available from an increase in customer deposits. Average net cash outflows decreased by CHF 2.9bn to CHF 84.4bn, mainly due to lower net outflows from intercompany funding from UBS AG, partly offset by an increase in customer deposits.

As of 31 March 2026, the net stable funding ratio decreased 0.9 percentage points to 124.3%, remaining above the prudential requirement communicated by FINMA. Available stable funding increased by CHF 10.8bn to CHF 367.8bn, mainly driven by increases in customer deposits, covered bonds issued and regulatory capital. Required stable funding increased by CHF 10.9bn to CHF 295.9bn, primarily reflecting higher lending assets and higher derivatives and cash collateral receivables on derivative instruments.

20	NSFR (%)	124.29	125.24	126.02	128.55	128.51

1 Calculated as 8% of total RWA, based on total capital minimum requirements, excluding CET1 buffer requirements. 2 Excludes non-BCBS capital buffer requirements for risk-weighted positions that are directly or indirectly backed by residential properties in Switzerland. 3 Represents the CET1 ratio that is available to meet buffer requirements. Calculated as the CET1 ratio minus the BCBS CET1 capital requirement and, where applicable, minus the BCBS tier 2 capital requirement met with CET1 capital. 4 There is currently no temporary exemption of central bank reserves for UBS. 5 The higher of capital requirements based on 8% of RWA or 3% of LRD. 6 Calculated after the application of haircuts and inflow and outflow rates, as well as, where applicable, caps on Level 2 assets and cash inflows. Calculated based on an average of 62 data points in the first quarter of 2026 and 64 data points in the fourth quarter of 2025. For the prior-quarter data points, refer to the respective Pillar 3 Report, available under "Pillar 3 disclosures" at ubs.com/investors, for more information. 7 UBS Switzerland AG is required to maintain a minimum NSFR of at least 100% on an ongoing basis, as set out in Art. 17h para. 1 of the Liquidity Ordinance. A portion of the excess funding is used to fulfill the NSFR requirement of UBS AG standalone.

Swiss systemically relevant bank going and gone concern requirements and information

The tables below provide details of the Swiss systemically relevant bank (SRB) RWA- and LRD-based going and gone concern requirements and information as required by FINMA; details regarding eligible gone concern instruments are also provided below.

UBS Switzerland AG is considered an SRB under Swiss banking law and is subject to capital regulations on a standalone basis. As of 31 March 2026, the going concern capital and leverage ratio requirements for UBS Switzerland AG standalone were 15.36% (including a countercyclical buffer of 0.85%) and 5.08%, respectively.

The Swiss SRB framework and going concern requirements applicable to UBS Switzerland AG standalone are the same as those applicable to UBS Group AG consolidated. The gone concern requirement corresponds to 62% of the Group's going concern requirements, excluding the countercyclical buffer requirements and Pillar 2 add-ons. Outstanding total loss-absorbing capacity-eligible unsecured debt instruments are eligible to meet gone concern requirements until one year before maturity.

The gone concern requirements were 9.00% for the RWA-based requirement and 3.15% for the LRD-based requirement.

› **Refer to "Capital and capital ratios of our significant regulated subsidiaries" in the "Capital management" section of the UBS Group Annual Report 2025, available under "Annual reporting" at *ubs.com/investors*, for more information about the joint liability of UBS AG and UBS Switzerland AG**

Leverage ratio denominator				564,403

1 Includes applicable add-ons of 1.66% for risk-weighted assets (RWA) and 0.58% for leverage ratio denominator (LRD). 2 UBS fulfills its minimum going concern capital requirements with CET1 capital and AT1 capital. The actual available and eligible AT1 capital is above the AT1 capital used to meet the minimum requirements (which is capped at 4.3%) as UBS exceeds its minimum going concern requirements. 3 A maximum of 25% of the gone concern requirements can be met with instruments that have a remaining maturity of between one and two years. Once at least 75% of the minimum gone concern requirement has been met with instruments that have a remaining maturity of greater than two years, all instruments that have a remaining maturity of between one and two years remain eligible to be included in the total gone concern capital. 4 Includes applicable add-ons of 1.03% for RWA and 0.36% for LRD.

UBS Europe SE consolidated

Key metrics for the first quarter of 2026

The table below provides information about the regulatory capital components, capital ratios, leverage ratio and liquidity of UBS Europe SE consolidated based on Basel Committee on Banking Supervision (BCBS) Pillar 1 requirements and in accordance with EU regulatory rules and IFRS Accounting Standards.

During the first quarter of 2026, available capital remained stable and risk-weighted assets increased slightly, to EUR 16.4bn, mainly driven by higher exposures in cash and securities financing transactions (SFTs), and new over-the-counter derivative exposures, partly offset by a decrease in loan facilities. The leverage ratio exposure increased by EUR 8.0bn to EUR 63.9bn, mainly driven by increases in cyclical trading volume, derivatives, SFTs and other assets, including multiple drivers, such as cash at central banks.

The average liquidity coverage ratio (the LCR) remained well above the regulatory requirement of 100%, at 137.5%. The decrease in the LCR was driven by an increase of EUR 0.7bn in total net cash outflows, partly offset by an increase of EUR 0.3bn in high-quality liquid assets (HQLA). Higher HQLA and net outflows were mainly due to an increase in UBS Group euro-clearing activities. The net stable funding ratio (the NSFR) remained well above the regulatory requirements of 100%, at 135.2%. The decrease in the NSFR was due to a EUR 0.7bn increase in required stable funding, reflecting higher client-driven activity levels in the Investment Bank, including positive replacement values related to the growth in the Asian market. This was partly offset by a EUR 0.6bn increase in available stable funding, driven by higher intercompany funding.

1 Based on applicable EU regulatory rules. 2 Row 9a of the FINMA template is applicable to the FINMA-regulated scope only and rows 14c and 14d have been removed because the EU does not require the disclosure of mean values for SFTs. 3 Calculated as 8% of total RWA, based on total capital minimum requirements, excluding CET1 buffer requirements. 4 Represents the CET1 ratio that is available for meeting buffer requirements. Calculated as the CET1 ratio minus the BCBS CET1 capital requirement and after considering, where applicable, CET1 capital that has been used to meet tier 1 and / or total capital ratio requirements under Pillar 1. 5 Calculated on the basis of tier 1 capital. 6 There is currently no temporary exemption of central bank reserves for UBS Europe SE. 7 The higher of capital requirements based on 8% of RWA or 3% of LRD. 8 Figures are calculated based on a 12-month average.

UBS Americas Holding LLC consolidated

Key metrics for the first quarter of 2026

The table below is based on Basel Committee on Banking Supervision (BCBS) Pillar 1 requirements and in accordance with US Basel III rules and generally accepted accounting principles in the US (US GAAP).

Effective 1 October 2025 until 2027, UBS Americas Holding LLC is subject to a stress capital buffer (an SCB) of 5.2%, in addition to the minimum risk-based capital requirements. The SCB, subject to a floor of 2.5%, was determined by the Federal Reserve Board following the completion of the 2025 Comprehensive Capital Analysis and Review (the CCAR) based on Dodd–Frank Act Stress Test (DFAST) results and planned future dividends.

During the first quarter of 2026, the common equity tier 1 (CET1) capital ratio increased 0.1 percentage points to 18.2% and the tier 1 capital ratio increased 0.1 percentage points to 21.9%. Both CET1 capital and tier 1 capital increased by USD 0.3bn, driven primarily by net profit. Risk-weighted assets (RWA) increased by USD 1.4bn to USD 77.1bn, driven by a USD 1.8bn increase in credit risk RWA, mainly in derivatives, loans and securities financing transactions, partly offset by a USD 0.4bn decrease in market risk specific risk exposure.

The tier 1 leverage ratio increased 0.1 percentage points to 8.4%, primarily driven by the aforementioned capital movements, partly offset by a USD 1.8bn increase in leverage exposure. Similarly, the tier 1 supplementary leverage ratio (the SLR) increased 0.3 percentage points to 7.4%, primarily driven by the aforementioned capital movements and a USD 4.9bn decrease in the SLR exposure, mainly in margin receivables.

The average liquidity coverage ratio decreased 6.5 percentage points to 120.9%, as high-quality liquid assets increased by USD 0.8bn and net cash outflow increased by USD 1.8bn. The average net stable funding ratio decreased 0.9 percentage points to 126.4% in the first quarter of 2026, driven by a USD 0.6bn increase in required stable funding, primarily as there was an increase in required operational balances and the exchange-traded derivatives initial margin.

VaR	value-at-risk
VAT	value added tax

This is a general list of the abbreviations frequently used in our financial reporting. Not all of the listed abbreviations may appear in this particular report.

Cautionary statement | This report and the information contained herein are provided solely for information purposes, and are not to be construed as solicitation of an offer to buy or sell any securities or other financial instruments in Switzerland, the United States or any other jurisdiction. No investment decision relating to securities of or relating to UBS Group AG, UBS AG or their affiliates should be made on the basis of this report. Refer to UBS's most recent annual report on Form 20-F, quarterly reports and other information furnished to or filed with the US Securities and Exchange Commission (the SEC) on Form 6-K, available at *ubs.com/investors*, for additional information.

Rounding | Numbers presented throughout this report may not add up precisely to the totals provided in the tables and text. Percentages and percent changes disclosed in text and tables are calculated on the basis of unrounded figures. Absolute changes between reporting periods disclosed in the text, which can be derived from numbers presented in related tables, are calculated on a rounded basis.

Tables | Within tables, blank fields generally indicate non-applicability or that presentation of any content would not be meaningful, or that information is not available as of the relevant date or for the relevant period. Zero values generally indicate that the respective figure is zero on an actual or rounded basis. Values that are zero on a rounded basis can be either negative or positive on an actual basis.

Websites | In this report, any website addresses are provided solely for information and are not intended to be active links. UBS does not incorporate the contents of any such websites into this report.
